

Changing food for good

- + For caterers.
- + For suppliers.
- + For producers.
- + For transforming the public plate.

Food for Life Supply Chain+ is a new flexible supply chain solution that brings together Soil Association initiatives and expertise with AgileChain tech automation. **We are enabling UK food producers and caterers to develop more diverse, reliable and sustainable food supply chains.**

£2.5bn

is spent each year on UK public sector food and drink. Very little is known about what that is spent on and where it came from.

What can **Food for Life Supply Chain+** deliver for producers and caterers?

For farmers & growers:

Access to public sector contracts, regardless of size and supply volume

For caterers & procurers

Access to sustainable, local producers and suppliers – including organic and agroecological farms.

- + Flexibility to compliment existing procurement frameworks.
- + Transparency of food environmental data: enabling informed choices, educating consumers, and meeting ESG goals.
- + Efficiency via tech enabled collaboration.
- + Reliability, value, fairness and data.
- + Impact in delivering more healthy, sustainable produce to public sector kitchens and expanding local economic benefits.
- + Reassurance through a pre-verified supply chain.
- + Resilience to reduce impact of shocks via shorter, local supply chains.

How does it work?

Through a powerful collaboration between Soil Association and AgileChain technology, we are developing greater fork to farm links.

Food for Life Supply Chain+ offers producers a reliable and fair route to market; and caterers a more resilient, efficient and transparent approach to the procurement of sustainable and nutritious food.
